1.PROJECT PROFILE

ProjectTitle	Roro Ferry Services
ProjectDefinition	The Roro Ferry Service System is a PHP web app that makes ferry booking and management easy for passengersand admin.
Frontend	HTML, CSS, Java Script, Ajax, SwiperJs, Bootstarp
Backend	PHP
Database	MySQL
ProjectCategory	WebApplication
DocumentationTool	Ms-Office
Editor	VisualStudio
Duration	3Months
GuidedBy	Dr.Veena Jokhakar
DevelopedBy	Mr. Smit Chakrani Mr. Nenish Jajadiya Mr. Krunal Kaklotar

2. INTRODUCTION

- RoroFerry gives safe and easy travel – You can travel with us by sea and we make your trip smooth and safe.
- Many routes and times help you travel when you want – We have different places you can go and different times to travel. You can choose what is best for you.
- New and clean ships make your trip nice and comfy – Our ferries are modern. They are clean and have good seats, clean bathrooms, and space for cars and trucks.
- We work hard to give good service and happy journeys – Our team is friendly. We try our best to help you have a good trip every time you travel with us.

2.1 SCOPE

Functional requirement of the project:

The purpose of this section is to cover each and every module of the web app project. Please review this section carefully and let us know your feedback if you would like to make any changes.

User Types

(Key Stack-holders) : The web app will have the following types of users

UserRole	Description	Platform
Admin	The admin can manage ferry trip packages, facilities, and user bookings. They can also handle user queries and update site settings for smooth operations.	Web Based Panel (Admin Dashboard)
User	Users can easily book and cancel tickets for their ferry trips. They can also leave reviews for their travel experience and make payments for their bookings directly through the platform.	Web Based Panel (Roro Ferry Site)

Admin Key Features:

- Manage Trip Packages – Admin can add, edit, or delete ferry routes and trip packages.
- Update Facilities & Features – Admin can update available services and features on ferries.
- Manage User Bookings – Admin can view, approve, or cancel user bookings.
- Handle User Queries – Admin can check and respond to user inquiries.
- Update Site Settings – Admin can edit homepage content, contact info, and other website details.

User Key Features:

- Book Tickets – Users can book ferry tickets easily through the platform.
- Cancel Tickets – Users can cancel their ferry tickets if needed.
- Leave Reviews – Users can leave feedback and reviews on their travel experience.

- Make Payments – Users can securely make payments for their bookings directly through the platform.

2.2 OBJECTIVE

- To design and implement a web-based RORO Ferry Management System with separate interfaces for both users and administrators.
- To allow users to register, log in, and manage their profiles while booking ferry packages based on their preferences (Local, Silver, Gold, Diamond).
- To enable users to view ferry schedules and book tickets for any of the available packages, with the same booking process for all package types.
- To develop an admin panel for managing ferry schedules, routes, pricing, user data, and customer reviews effectively.
- To ensure a smooth and responsive user experience with dynamic content loading.
- To securely manage booking records, payment transactions, seat availability, and customer feedback using a robust database system.

2.3 Advantage

The RORO Ferry Management System provides users with the ability to book ferry tickets online from anywhere at any time.

It eliminates the need to visit physical booking counters, making the process faster and more convenient.

The system displays real-time seat availability for Packages, helping users make informed booking decisions.

Secure online payment integration ensures safe and quick transactions, with proper record-keeping.

Users can choose from multiple packages like Local, Gold, Diamond, and Platinum based on their travel preferences.

Admin can manage ferry schedules, package details, and user information from a centralized dashboard.

Booking history and payment records are maintained in the system for both users view when needed.

2.4 Facibility Study

- Feasibility study is an assessment of the practicality of a proposed project or System.

- Feasibility study is conducted once the problem is clearly understood.

- The system has been tested for feasibility in the following points.
  1. Technical Feasibility
  2. Economical Feasibility
  3. Operational Feasibility

1. Technical Feasibility

- Our project is technically feasible because of the below mentioned feature.

- We have completed admin module and for feasibility study, we studied complete functionality of the admin module as described in the Software Requirement Specification(SRS).

- Admin can successfully login to the system and perform tasks assigned to the admin.

2.Economical Feasibility

- This is very important aspect to be considered while developing a project .

- We decided the technology based on the minimum possible cost factor.

3.Operational Feasibility

- The proposed system is fully GUI based and it is very user friendly.

3. System Environment

3.1 Hardware & Software Requirement Specification

SOFTWARE REQUIREMENT

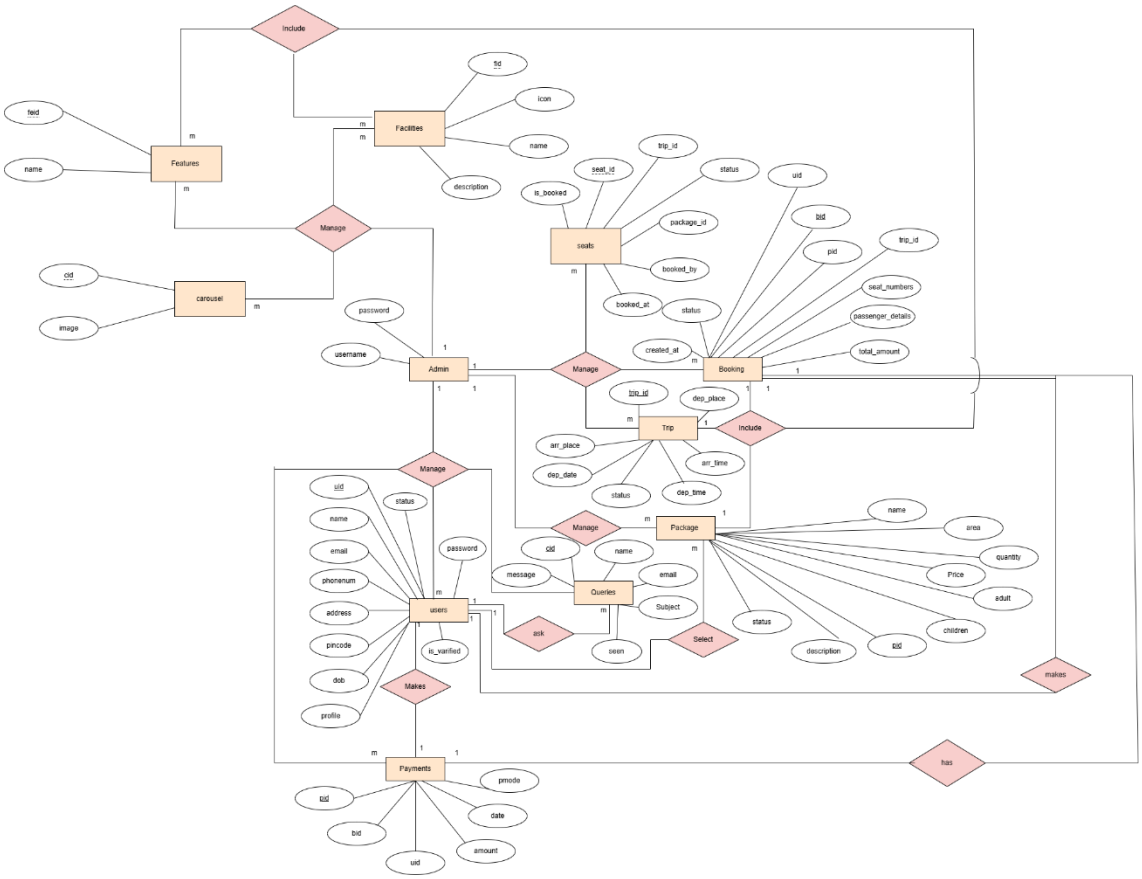

HEADING	DISCRIPTION
Operating System	Windows, IOS, Linux
PHP	Version 7 or above
Xampp	Version 3.3.0
MySQL	Version 5.2.1
Web Browser	Microsoft Edge, GoogleChrome, Safari, Firefox
Server	Localhost

HARDWARE REQUIREMENT

HEADING	DISCRIPTION
Hard Disk	256 GB
Monitor	15'' LED
Input Devices	Keyboard , Mouse
Ram	4 GB
Microprocessor	i3 5th Gen
Internet Connection	512 kbps

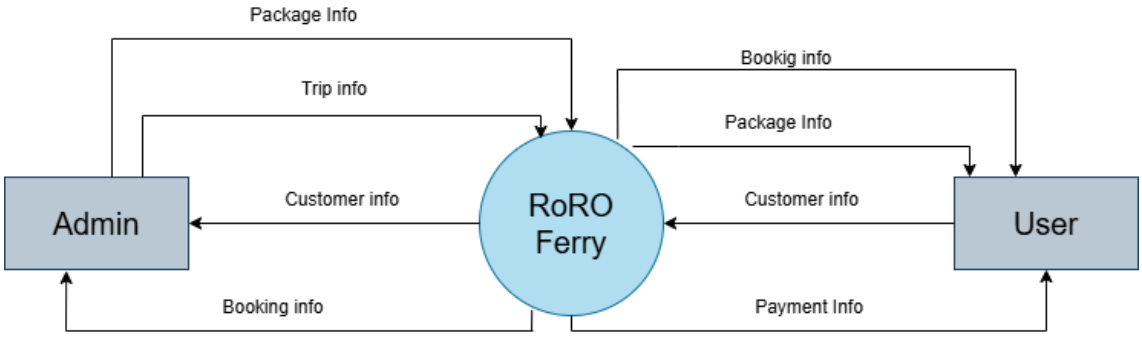

4. System Analysis and Modeling

4.3 Data Dictionary

Name	Admin
Alias	-
Where & How Use	Backend/admin login and access control
Description	username, password
Format	Alphanumeric

Name	Users
Alias	-
Where & How Use	User registration, login, and profile management
Description	id, name , emai, address, phonenum, pincode, dob, profile, password, is_verified, token, token_expire, status, created_at, reset_token, token_expiry
Format	Alphanumeric / Varchar / DateTime

Name	Booking
Alias	-
Where & How Use	For user trip booking and transaction details
Description	bid, uid, pid, trip_id, seat_numbers, passenger_details, total_amount, created_at, status
Format	pdf

Name	Package
Alias	-
Where & How Use	Display available packages on website
Description	pid, name, area, price, quantity,adult, children, description, status, removed
Format	Alphanumeric / Integer

Name	Trip
Alias	-
Where & How Use	Used to list trips and their details
Description	trip_id, trip_day, dep_place, arr_place, dep_date, dep_time, arr_time, status
Format	Alphanumeric / Date

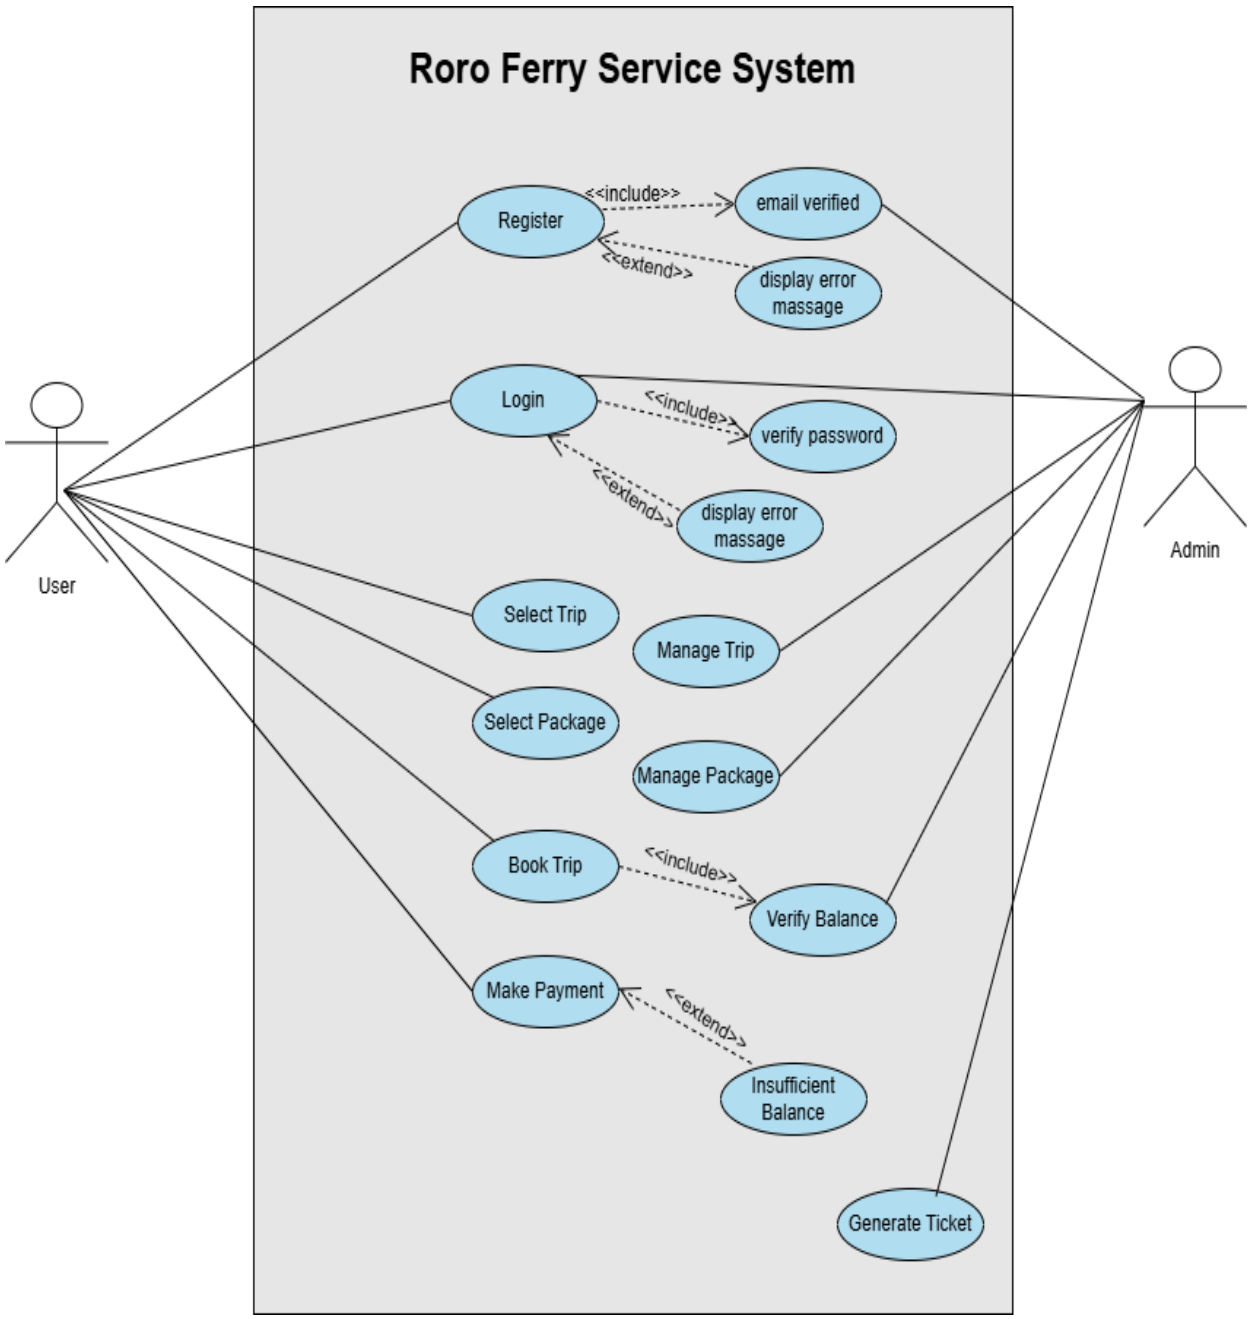

Name	Seats
Alias	-
Where & How Use	Manages seat availability and allocation
Description	seat_id, trip_id, package_id, seat_number, status, is_booked, booked_by, booked_at
Format	Numeric / Boolean

Name	Queries
Alias	-
Where & How Use	Contact form submissions and user queries
Description	id, name, email, subject, message, seen
Format	Alphanumeric / Varchar / DateTime

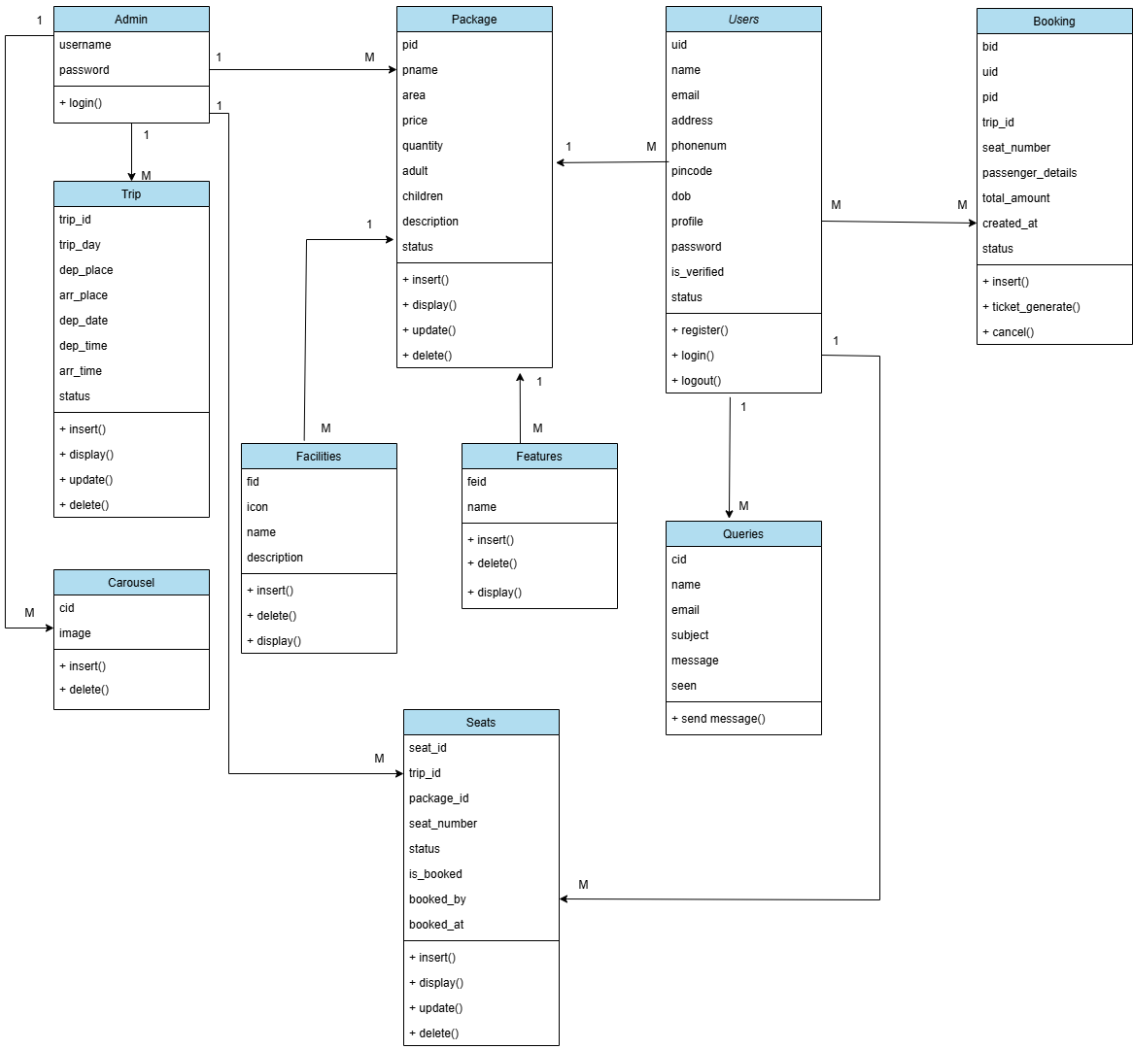

Name	Facilities
Alias	-
Where & How Use	Lists general facilities offered in packages or trips
Description	fid, icon, name, description
Format	Alphanumeric / Boolean

Name	Features
Alias	-
Where & How Use	Highlights key features of the website/packages
Description	feid, name
Format	Alphanumeric / Boolean

5. Testing

5.1 Unit Testing

- **Test Case for User Login:**

Test field	Test Data	Executed result	Test result
Email	Null	Invalid	Please fill out this field
	Krunal.gmail.com	Invalid	Please include @ in email id
Password	Null	Invalid	Please fill out this field.
	krunal	Invalid	Incorrect password
Role	Null	Invalid	Please fill out this field
	Admin	User Login	Invalid credentials or not verified

- **Test Case for User Registration**

Test field	Test Data	Executed result	Test result
Name	Null	Invalid	Please fill out this field
	123	Invalid	Enter a valid name(2-50 letters).
Email	Null	Invalid	Please fill out this field.
	krunal	Invalid	Enter a valid email address.
Phone number	Null	Invalid	Please fill out this field
	Abc & less than 10 digit	Invalid	Phone number should be 10 digits.

picture	Null	valid	-
Address	Null	Invalid	Address cannot be empty.
Pincode	39500	invalid	Enter a valid 6-digit pincode.
Date of Birth	Null	Invalid	Please fill out this field
Password	Krunal	Invalid	Must be 8+ chars with letter, number & special char.
Confirm Password	Null	invalid	Passwords do not match.

❖ **Test Case for package add/edit**

Test field	Test Data	Executed result	Test result
Name	Null	Invalid	Please fill out this field.
Aria	Null	Invalid	Please fill out this field.
Price	Null	Invalid	Please fill out this field.
Quantity	Null	Invalid	Please fill out this field.
Adult	Null	Invalid	Please fill out this field.
Children	Null	Invalid	Please fill out this field.
Facilities	Null	Invalid	Please fill out this field.
Features	Null	Invalid	Please fill out this field.
Description	Null	Invalid	Please fill out this field.

❖ **Test Case for feature**

Test field	Test Data	Executed result	Test result
Name	Null	Invalid	Please fill out this field.

❖ **Test Case for facilities**

Test field	Test Data	Executed result	Test result
Name	Null	Invalid	Please fill out this field.
Icon	Null	Invalid	Please fill out this field.
Description	Null	Invalid	Please fill out this field.

Test Case for schedule

Test field	Test Data	Executed result	Test result
Day	Null	Invalid	Please fill out this field.
Departure Date	Null	Invalid	Please fill out this field.
Departure Time	Null	Invalid	Please fill out this field.
Arrival Time	Null	Invalid	Please fill out this field.

❖ **Test Case for contact us**

Test field	Test Data	Executed result	Test result
Address	Null	Invalid	Please fill out this field.
Social Links	Null	Invalid	Please fill out this field.
Google map	Null	Invalid	Please fill out this field.
Phone Number	Null	Invalid	Please fill out this field.
Email	Null	Invalid	Please fill out this field.
Iframe src	Null	Invalid	Please fill out this field.

- **Test Case for carousel**

Test field	Test Data	Executed result	Test result
Image	Null	Invalid	Please fill out this field.

- **Test Case for feature**

Test field	Test Data	Executed result	Test result
Name	Null	Invalid	Please fill out this field.

❖ **Test Case for facilities**

Test field	Test Data	Executed result	Test result
Name	Null	Invalid	Please fill out this field.
Icon	Null	Invalid	Please fill out this field.
Description	Null	Invalid	Please fill out this field.

❖ **Test Case for schedule**

Test field	Test Data	Executed result	Test result
Day	Null	Invalid	Please fill out this field.
Departure Date	Null	Invalid	Please fill out this field.
Departure Time	Null	Invalid	Please fill out this field.
Arrival Time	Null	Invalid	Please fill out this field.

❖ **Test Case for contact us**

Test field	Test Data	Executed result	Test result
Address	Null	Invalid	Please fill out this field.
Social Links	Null	Invalid	Please fill out this field.

Google map	Null	Invalid	Please fill out this field.
Phone Number	Null	Invalid	Please fill out this field.
Email	Null	Invalid	Please fill out this field.
Iframe src	Null	Invalid	Please fill out this field.

5.2 Functional Testing

Functional testing is a quality assurance (QA) process and a type of black-box testing that bases its test cases on the specifications of the software component under test. Functions are tested by feeding them input and examining the output, and internal program structure is rarely considered (unlike white-box testing). Functional testing usually describes what the system does.

Since functional testing is a type of black-box testing, the software's functionality can betested without knowing the internal workings of the software.

Functional testing does not imply that you are testing a function (method) of your moduleor class. Functional testing tests a slice of the functionality of the whole system.

1. User Account Creation & Verification

- **Test Case 1.1:** Verify user registration with valid data (name, email, password, etc.).
    - **Expected:** Account created successfully; verification email/SMS is sent.

- **Test Case 1.2:** Attempt registration with already registered email.
    - **Expected:** Error message shown.

- **Test Case 1.3:** Attempt to register without completing required fields.
    - **Expected:** Validation errors displayed.

2. Sign In / Sign Out & User Data Load

- **Test Case 2.1:** Sign in with valid credentials.

    - **Expected:** User is logged in and dashboard loads with user data.

- **Test Case 2.2:** Sign in with invalid credentials.
    - **Expected:** Error message is displayed.

- **Test Case 2.3:** Sign out after login.
    - **Expected:** Session ends and redirects to login page.

3. Change Password / Delete Account

- **Test Case 4.1:** Change password with correct old password.
    - **Expected:** Password updates successfully.

4. Transaction Records Admin Side (CRUD)

- **Test Case 5.1:** Create a transaction with all required fields.
    - **Expected:** Transaction is saved and shown in the list.

- **Test Case 5.2:** Edit a saved transaction.
    - **Expected:** Updated details are reflected correctly.

- **Test Case 5.3:** Delete a transaction and confirm.
    - **Expected:** Transaction is removed from the record list.

5. Export Transactions

- **Test Case 6.1:** Click export (PDF/Excel).
    - **Expected:** File downloads with proper transaction data.

6. Analysis (Filtering)

- **Test Case 7.1:** Apply filters by date, category
    - **Expected:** Only matching transactions are shown.

8. Home Dashboard Analysis

- **Test Case 8.1:** Load dashboard after login.
    - **Expected:** Analysis widgets and summary charts display latest data.

7. All Tools (Calculator, Budgeting, etc.)

- **Test Case 10.1:** Use calculator or tool feature.
  - **Expected:** Tool functions correctly with correct results.

8. Payment Gateway Integration

Test Case 1.1: Verify successful payment transaction

- **Description**: Ensure that a valid payment is processed successfully.
- **Steps**:
  1. Select a payment method (e.g., credit card, digital wallet).
  2. Enter payment details (valid card number, expiration, CVV, etc.).
  3. Complete the payment.
- **Expected Result**: Payment is successful, and a confirmation message is displayed along with a transaction ID.

Test Case 1.2: Verify payment with insufficient funds

- **Description**: Ensure that payments are rejected when the user does not have enough funds.
- **Steps**:
  1. Select a payment method.
  2. Enter payment details with an invalid or insufficient balance.
  3. Attempt to complete the payment.
- **Expected Result**: Payment fails with an error message indicating insufficient funds.

Test Case 1.3: Verify payment with expired credit card

- **Description**: Ensure the payment fails if the card has expired.
- **Steps**:
  1. Select a payment method.
  2. Enter payment details with an expired card.
  3. Attempt to complete the payment.
- **Expected Result**: Payment fails with an error message indicating the card has expired.

Test Case 1.4: Verify successful payment using a promo code

- **Description**: Test applying a valid promo code to the payment process.
- **Steps**:
    1. Select a payment method.
    2. Apply a valid promo code (if any).
    3. Complete the payment.
- **Expected Result**: Promo code is applied successfully, and the correct discount is reflected in the final payment amount.

Test Case 1.5: Verify failed payment due to incorrect payment details

- **Description**: Ensure that the payment fails when the user enters incorrect payment details.
- **Steps**:
    1. Select a payment method.
    2. Enter incorrect payment details (e.g., wrong card number).
    3. Attempt to complete the payment.
- **Expected Result**: Payment fails, and an error message appears, indicating incorrect payment details.

5.3 Environment Testing

A testing environment is a software and hardware configuration that allows testing teamsto run test cases. In other words, it enables test execution with properly configured hardware, software, and network.

The test bed or test environment is set up according to the requirements of the ApplicationUnder Test. On rare occasions, a test bed may be a mix of the test environment and thetest data with which it interacts.

Software testing success is ensured by setting up the correct test environment. Any errorsin this procedure may result in the customer incurring more costs and effort.

6. Design

6.2 Interface Design

1. Home Page

Who We Are

Where Roads Meet the Sea!

Connecting Gujarat 🌐 Bridging Distances

Prime Minister Narendra Modi inaugurated Phase 1 of the 'roll-on, roll-off (Ro-Ro)' ferry service between Ghogha and Dahej in Gujarat. The Ro-Ro ferry transports both people and vehicles across the Gulf of Khambhat, linking Ghogha in Bhavnagar with Dahej in Bharuch district.

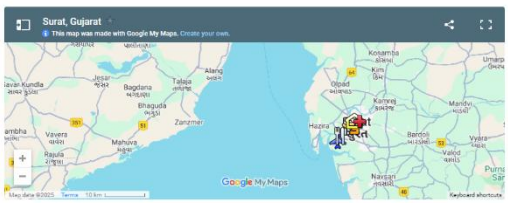

This service significantly reduces travel time between peninsular Saurashtra and South Gujarat by approximately five hours. It's the first project of its kind in India and spans a 31 km route.

The first phase of the project was completed at a cost of ₹615 crore. Although the concept dates back to the 1960s, the foundation stone for the current initiative was laid by Narendra Modi in 2012, during his tenure as Chief Minister of Gujarat.
